DETAILED ACTION

Drawings

1. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81. No new matter may be introduced in the required drawing.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Objections

3. Claim 1 is objected, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, line 8, it is not clear what is meant by the phrase "substantially uneconomic".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3672

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Whitten et al. ('625).

Whitten discloses a method for recovering heavy oil from an underground reservoir, comprising (a) injecting steam and producing heated oil and steam condensate by steam assisted gravity drainage (SAGD) in a first section of the reservoir until it is substantially uneconomic to continue doing so (see Fig. 1, and col. 2, lines 5-22); (b) preparing an adjoining section of the reservoir for SAGD; (c) terminating or reducing steam injection into the reservoir first section (see col. 2, lines 22-24), (d) injecting steam and producing heated oil and steam condensate by SAGD in an adjacent second section of the reservoirs (see col. 2, lines 26-28); and(e) concurrently with step (d), injecting a non-condensable gas into the first section to pressurize it and producing residual oil and steam condensate from said first section (see Fig. 2, and col. 2, lines 25-28).

Referring to claim 2, Whitten discloses the first section is pressurized in step (e) to a pressure about equal with the steam injection pressure in step (d) (see col. 2, lines 39-44).
